community college

HOPE

- The Strategic Enrollment Management team of COCC determined that the student population of the college was not representative of the population that we serve. Several full time positions were introduced, including the Latino Program Coordinator – Evelia Sandoval. It is through her work and determination that we have gone from 5 % to 10 % Latino students in a seven year period. Evelia says that it is about families and relationships, but reminds me that there is no real system for them – often marginalized, underserved, undocumented, and taking away HOPE. The vast majority of our Latino students are first generation college students.

MOVE

- History of the Automotive Program – started in 1958 – in the population center – Bend. Population 15,000
- To better serve a broader range of our population, the Automotive Technology Program will move to the Redmond Campus to be more central and provide easier access on a smaller campus.
- We believe that student success has to include better access.

Thank you - Ken Mays; Director of Automotive Technology, COCC
