

VFA Historical Files

AACC has created excel files for all past VFA participants that contain all the calculated metrics for all the years each college has participated. These data are available on request for each college. To obtain a copy of the file, please send an email to:

vfa@aacc.nche.edu

Once we receive the request, you will be provided with access to a secure folder that contains the Excel workbook. The workbook will have separate tabs for each of the VFA components:

- Adult Basic Education
- CTE metrics
- Student progress and Outcomes cohort
- Developmental Education by subject
- Students referred to any developmental education
- Pathways KPI metrics
- Two-year progress and outcomes metrics
- Six-year outcomes
- IPEDS graduation rate

Each tab will contain all the disaggregated data, for all the cohort types for all the cohort years reported. The files can easily be used in EXCEL pivot tables to analyze prior year data. A companion Excel file with the column definitions will be provided to help with analysis.

In addition to individual college level data, a series of benchmark Excel files have also been created and will be made available to all participants. The benchmark Excel files include data from 96 colleges that had student progress and outcome data for each of the past six collection cycles. Due to the limited amount of data for CTE and ABE, benchmark files were not created for these metrics.
